Experiment - 9

Analyse different types of server using webalizer

Aim:

To analyze web server log files and generate detailed statistical reports about server usage using the webalizer by analysis tool

Procedure:

1) Install Apache 2: sudo apt install apache 2

2) Install webalizer : sudo apt install webalizer

3) Generate traffic : use browser to access local host

4) verify log files at /var/log/apache2

5) Run webalizer: sudo webalizer

6) on run manually : sudo webalizer /var/www/html/webalizer

command / code

install required packages

sudo apt-get install apache2

generate sample traffic

for i in $(seq 150); do curl -s http://localhost; done

view access log

cat /var/log/apache2/access.log/tail.20

Run webalizer in access log

sudo webalizer /var/log/apache2/access.log -o /var/www/html/webalizer

view output

ls /var/www/html/webalizer.com

7) navigate output directory : cd /var/www/html/webalizer

8) open index.html in browser : http://localhost

9) open index.html in browser

10) Examine the monthly summary : total hits, pages, visits, uniques

11) view hourly / daily statistics chart

13/1 + 9/10

Result:

webalizer was successfully installed and configured. web server logs were analysed and detailed html reports were generated
